PRESS RELEASE 01/2008

Berlin, 8th May 2008

## **BANDELIN at the O & S trade fair**

BANDELIN will present its proven ultrasound cleaning devices at this year's O & S, the International Trade Fair for Surface Treatments and Coatings.

The fair visitors will be able to attend a demonstration of how immersible transducers work, and our exhibition items will include multi-frequency units from the ZM product line featuring the TwinSonic® technology, and the modular design of units from the RM product line including peripheral equipment.

Still a highlight: explosion plated compound ultrasound.

When exposed to particularly intense strains (e. g., high pressure or vacuum strain), immersible transducers and transducer plates made from compound ultrasound have a longer lifespan and are more robust and less susceptible to trouble.

With a wide variety of features available for our immersible transducers and transducer plates, BANDELIN offers a suitable solution for any cleaning problem.

Visit BANDELIN at the O & S in hall 004, booth C 42.
