PRESS RELEASE 04/2009

Berlin, February 13th, 2009

Using ultrasound in dental practices and laboratories

Bandelin will once again be presenting its wide range of ultrasonic cleaning devices at this year's International Dental Show.

In addition to compact devices from the Sonorex Super and Digitec series which are used for fast and time-saving applications, we will also be introducing the Sonorex Super RK 513, a device for cleaning dental instruments in cassettes.

Ultrasonic baths have proved their worth in the dental branch when it comes to disinfecting and cleaning contaminated instruments, and removing dental calculus from dentures, as well as cement residues, dental plaster or grinding and polishing pastes. The cavitation bubbles created by the ultrasound clean gently and fast, and the cassette cleaning function means that the user is also provided with sophisticated instrument management.

To complement their ultrasonic devices, Bandelin also recommends the Stammopur disinfection and cleaning agents, which have been specially developed for ultrasonic applications.

You can find BANDELIN at the IDS in Hall 10.1, Aisle C and Stand 071.
